* May be added by your IT Team or by upgrading to ProAdmin Online.

Features Overview

ProAdmin Desktop

Primary Uses:

- Single user benefit calculation program. Setup rules, run calculations and view output.
- Setup plan rules can be exported to either ProAdmin Server or ProAdmin Online.

Features:

- Benefit expression language used to model benefit formulas
- Doesn't include an embedded database but can link to virtually any third party database product (e.g., Access, SQL Server, etc.)
- Extensive sample life output to help diagnose calculation problems

Potential Users:

- Actuarial consulting firms to run benefit calculations in-house
- Plan sponsor HR departments

- Plan sponsors, TPAs and consulting firms (to supplement ProAdmin Server and ProAdmin Online)

ProAdmin Server

Primary Uses:

- As a web service integrated into a client's technology infrastructure
- Just calculates benefits, expects the calling routines to handle user interfaces and reading and writing to databases.

Features:

- The web service interface makes it very versatile
- Fast, scalable
- No graphical user interface, expects plan rules to be built and maintained with ProAdmin

Potential Users:

- TPAs, plan sponsors, consulting firms

ProAdmin Online

Primary uses:

- Self service website for both administrators and participants
- Customizable from a simple 1-2 page benefit estimator website to a full administration system with plan documents, data edits and calculation audit tables.

Features:

- Seamlessly integrates with ProAdmin Server to run benefit calculations
- Complete website administration capability; modify web pages, output, etc.

Potential Users:

- Plan sponsors
- Consulting firms; for their clients or to use in-house.
